

#### ABSTRACT OF THE DISCLOSURE

A shape measurement device includes: a stage for loading a subject for measurement; an imaging section that forms an image of the subject for measurement; and a shifting section that 5 implements relative shifting between the imaging section and the subject for measurement to shift the imaging section to a position corresponding to a portion on the subject for measurement which is to be measured, and the shifting section implements the relative shifting by shifting the imaging section 10 without shifting the stage.
